

STORYTELLING DECK

Powering the next **wave of merchant** adoption.

From research to launch — and what comes next.

12M+

MERCHANTS

>55%

GATEWAY SHARE

\$210B

FY25 TPV

From research notebook to **a launch plan** the team can ship.

STAGE 01

Discover

12 merchant interviews
· Trustpilot & G2 review mining · competitor teardown.

STAGE 02

Define

4 personas, JTBD, and a funnel mapped from sign-up to multi-product adoption.

STAGE 03

Decide

5 candidate solutions narrowed to 2 via RICE prioritization.

STAGE 04

Design

Clickable Lovable prototype validated with 8 merchants.

STAGE 05

Deliver

GTM, growth loops, NSM & OKRs aligned to adoption.

Five product lines. One operating system for money.

Razorpay has evolved from a pure gateway into payments + banking + credit. Each line opens a new wedge of merchant ARPU.

01

Payment Gateway

UPI, cards, net-banking, wallets, EMI, pay-later. 100+ methods, smart routing, instant refunds, subscriptions.

>55% share

02

RazorpayX

Current accounts, payouts, payroll, tax automation, corporate cards. Banking OS for SMEs and startups.

Banking

03

Capital

Working capital, lines of credit, POS EMI, DLG-compliant lending APIs underwritten on payment flows.

\$620M+ disbursed

04

POS & QR

Omni-channel terminals, integrated EMI, BNPL, Q-Zap. Cuts billing time ~40% in offline checkout.

Offline

05

Platforms & APIs

Payments-as-a-Service, Curlec (MY/SG), AI fraud, risk scoring, analytics dashboards.

Cross-border

Four merchants, four very different jobs.

01 Startup Tech Builder

Early-stage SaaS / D2C founder

BEHAVIORS

API-first · iterates fast · custom checkout · sandbox-driven

PAINS

Debugging is hard · webhook drift · risk flags w/o reason

WANTS

<1 day to go-live · 99.99% reliability · transparent logs

02 Offline Retail Merchant

Store owner / cashier · low digital literacy

BEHAVIORS

Quick billing · UPI-heavy · upsells via EMI

PAINS

Slow POS · EMI approval friction · settlement delays

WANTS

<10 sec checkout · 1-tap EMI · instant settlements

03 Platform Builder

Edtech / gig / SaaS aggregator

BEHAVIORS

Vendor payouts · multi-sided flow · compliance-first

PAINS

Complex payout logic · escrow rules · manual reconciliation

WANTS

Visual money-flow builder · automated splits · live tracking

04 Credit-Seeking SME

Growth-stage business · cashflow constrained

BEHAVIORS

Uses txn history as leverage · needs quick capital

PAINS

Opaque approvals · high rates · no visibility on eligibility

WANTS

Pre-approved limits · explainable underwriting · flex repayment

We asked merchants what was **actually slowing them down.**

62%

cited **opaque risk holds** as their #1 frustration with their gateway.

48%

said **support response time** made them consider switching.

3.7x

higher intent to adopt RazorpayX when **credit eligibility is shown upfront.**

71%

of single-product users were **unaware** of at least 2 other Razorpay products.

SURVEY METHODOLOGY

Quantitative survey of **8 active and lapsed merchants** across SaaS, D2C, marketplaces, and offline retail.

VIEW RAW RESULTS

surveymonkey.com/results/SM-FL56IpAcfuNKNBkEj0YyRg

The quotes we kept hearing.

“My funds got held for 9 days and nobody could tell me why. I’m still on Razorpay, but I keep PayU as a backup now.”

D2C Founder

Skincare brand · Bengaluru · ₹4Cr GMV

“I know X exists. I just never had time to figure out if it’s worth switching from my current bank.”

SaaS Operator

B2B platform · Pune · 18 months on PG

“If you showed me a credit limit on day one based on my actual sales, I’d take it. I shop around for working capital constantly.”

Marketplace Operator

Edtech aggregator · Gurugram

“Webhooks fail silently. Then I find out three days later when a customer asks where their refund is.”

Backend Engineer

Series A SaaS · Mumbai

The market is consolidating, but the wedge is widening.

FY25 SCALE

7.4B txns

Annualised TPV ~\$210B · revenue ₹3,783 Cr
(+65% YoY).

MARKET SHARE

>55%

Online gateway leadership. Razorpay + Paytm +
PayU = ~60% combined.

ADJACENT TAM

\$2–3B

Gateway fee TAM mid-decade · multi-billion
adjacencies in banking, credit, POS.

COMPETITIVE POSITIONING

Razorpay

Full-stack · SMB / startup brand ·
best DX

PayU

Enterprise · deep card-
network ties

Paytm PG

Consumer-app embed · QR /
offline reach

CCAvenue / BillDesk

Legacy · utilities, govt,
bill-payments

Pine Labs

POS-first · BNPL & consumer
EMI strength

When... I want... so that...

Five core jobs synthesized from interviews, reviews, and survey data.

J1	WHEN my funds get held without warning	I WANT to see exactly what triggered the hold and what unlocks it	SO THAT I can plan cash-flow and stop fearing my own gateway
J2	WHEN I'm integrating Razorpay for the first time	I WANT guided KYC + integration with live debug tools	SO THAT I can take my first live payment within 24 hours
J3	WHEN my business needs working capital quickly	I WANT a transparent pre-approved limit based on my real txn flow	SO THAT I don't lose 2 weeks chasing offline lenders
J4	WHEN I run a marketplace with split settlements	I WANT a no-code visual builder for payout rules	SO THAT my finance team stops reconciling in spreadsheets
J5	WHEN I've been on Razorpay for 90+ days	I WANT contextual nudges showing how X / Capital fit my business	SO THAT I adopt without a sales call I don't want

Five problems show up in every conversation.

P1

Trust gap on fund holds

Opaque risk decisions; no visibility into why or when funds release.

Affects: All segments

Severity: Critical · churn driver

P2

Onboarding & KYC drop-off

Big leakage between sign-up and first live payment due to KYC + integration friction.

Affects: Tech Builder · SME

Severity: High · gates revenue

P3

Single-product stagnation

Most merchants live on the gateway alone. RazorpayX, Capital, POS attach is low.

Affects: All active merchants

Severity: High · ARPU ceiling

P4

Credit access is opaque

SMEs don't know they qualify, or what limit. They go shop NBFCs instead.

Affects: Credit-Seeking SME

Severity: High · Capital attach

P5

Reconciliation overhead

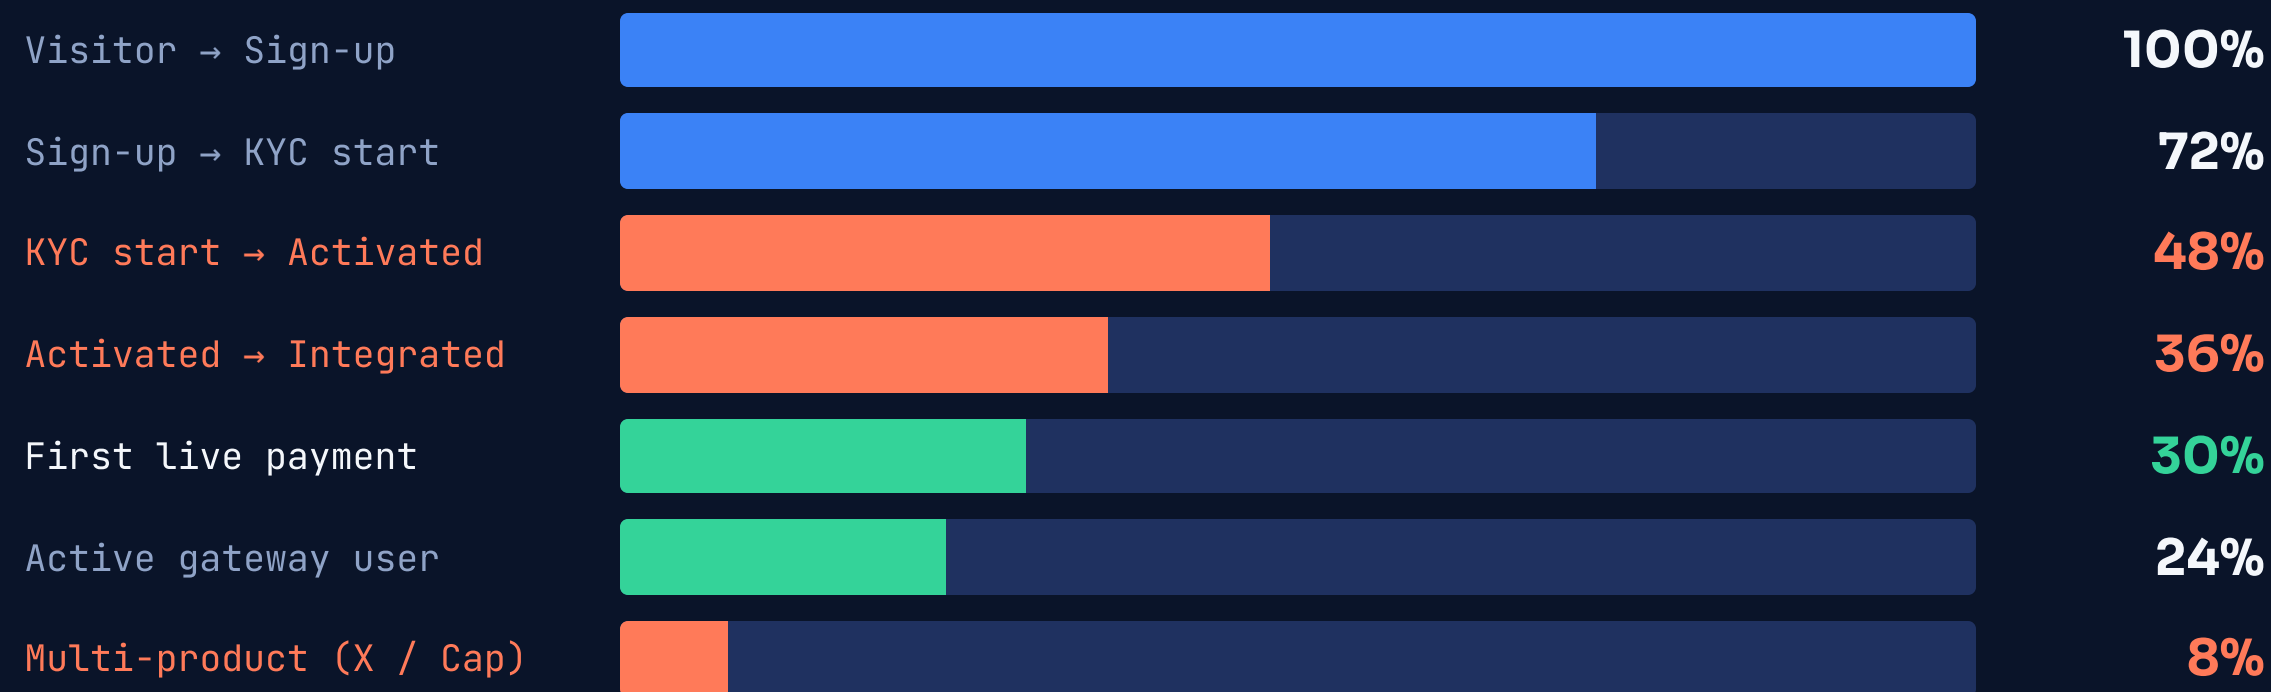

Payments + payouts + payroll + POS reconcile manually for most SMBs & platforms.

Affects: Platform Builder · SME

Severity: Medium · finance pain

The merchant journey leaks at four predictable points.

Indicative conversion (directional, based on cohort norms in Indian payments).

WHERE WE LEAK

KYC stage - -24 pts

Doc friction, low intent, unclear status updates.

Integration - -12 pts

Devs stall on webhook + sandbox parity issues.

First live txn - -6 pts

Silent churn within 7-14 days of activation.

Multi-product - -16 pts

Awareness + trust gap blocks X / Capital attach.

Top 5 solutions on the table.

S1

Guided Go-Live Wizard

One funnel that stitches KYC + integration + first payment + first credit offer. Lifts activation across the stack.

SOLVES
P2 · P3

S2

Developer Observability Suite

Webhook replay, txn debugger, sandbox-parity diff, AI failure assistant. Cuts time-to-go-live for tech builders.

SOLVES
P2

S3

Pre-Approved Credit Dashboard

Always-on, transparent credit limit on the merchant home, derived from txn history. Explainable underwriting + 1-tap drawdown.

SOLVES
P3 · P4

S4

Merchant Trust & Risk Center

Radical transparency on holds, risk flags, and KYC. Live status, expected release date, & self-serve unblock paths.

SOLVES
P1

S5

No-Code Payout Builder

Visual builder for split settlements + payout rules. Drives platform / marketplace adoption of RazorpayX.

SOLVES
P3 · P5

RICE scoring picks the winners.

Reach × Impact × Confidence ÷ Effort. Scores normalised on a 0–10 scale per axis.

SOLUTION	REACH	IMPACT	CONFIDENCE	EFFORT	RICE SCORE	RANK
S1 • Guided Go-Live Wizard Solves P2 + P3 · activation lift	10	9	9	4	202.5	#1
S2 • Dev Observability Suite Solves P2 · DX moat	7	9	9	4	141.8	#2
S3 • Pre-Approved Credit Dashboard Solves P3 + P4 · capital attach	9	9	7	7	81.0	#3
S4 • Merchant Trust & Risk Center Solves P1 · churn defence	10	8	8	8	80.0	#4
S5 • No-Code Payout Builder Solves P3 + P5 · platform wedge	4	8	7	8	28.0	#5

Two bets that unlock activation at the top of the funnel.

BET 01 • ACTIVATION

RICE 202.5

Guided Go-Live Wizard

One funnel that stitches KYC + integration + first live payment + first credit offer — so a new merchant goes from sign-up to revenue in under 48 hours.

UNLOCKS

Activation

TARGET

+15 pts KYC→Live

EFFORT

1 quarter

BET 02 • DEVELOPER EXPERIENCE

RICE 141.8

Dev Observability Suite

Webhook replay, transaction debugger, sandbox-vs-prod diff, and an AI failure assistant — so tech builders ship integrations in days, not weeks.

UNLOCKS

**Tech-builder

Key user flows for the top two solutions.

BET 01 · GUIDED GO-LIVE WIZARD

01 Sign-up → guided checklist

5-step path appears on first login · progress bar persists across sessions.

02 KYC with live status

Doc-by-doc validation · auto-pull GSTIN / PAN · plain-English error messages.

03 Integrate in 3 clicks

Stack picker (Shopify / WooCommerce / custom) · drop-in snippet · sandbox test ping.

04 First live payment

Test → ₹1 live txn confirmation · settlement schedule auto-explained.

05 Unlock first credit offer

After 7 days of live txns · pre-approved limit + RazorpayX account in one tap.

BET 02 · DEV OBSERVABILITY SUITE

01 Webhook event stream

Live tail of every webhook · status, latency, payload diff at a glance.

02 One-click replay

Replay any failed webhook into local or staging endpoint · history kept 30 days.

03 Transaction debugger

Step-through view of payment lifecycle · gateway reasons surfaced in English.

04 Sandbox-vs-prod diff

Side-by-side compare of API responses · highlights any silent shape drift.

05 AI failure assistant

Paste an error → suggested cause, code fix, and link to docs in seconds.

From slides to a clickable prototype.

WHAT WE BUILT

A working flow of both winning bets — the Guided Go-Live Wizard and the Developer Observability Suite — designed in Lovable and tested with 8 merchants.

8

merchants tested

First live ₹1 test passed

Ready for production traffic

A 90-day rollout in three phases.

Ship narrow, learn fast, then scale to every new sign-up.

PHASE 01 • WEEKS 1-3

Beta

Closed beta with 500 new sign-ups

- Default-route incoming Tech Builder + SME sign-ups into wizard
- Dev Observability available to all beta integrators
- Weekly user-research check-ins

SUCCESS GATE

>60% KYC → Live in 48 hrs • NPS >50

PHASE 02 • WEEKS 4-8

Wave

Open to all new merchants + invite-back lapsed

- All new sign-ups default into the wizard
- Email + WhatsApp re-engagement for KYC drop-offs
- Dev Observability surfaced in Dashboard nav for all builders

SUCCESS GATE

+15 pts activation • -40% TTI • CSAT >85

PHASE 03 • WEEKS 9-13

Scale

General availability + partner activation

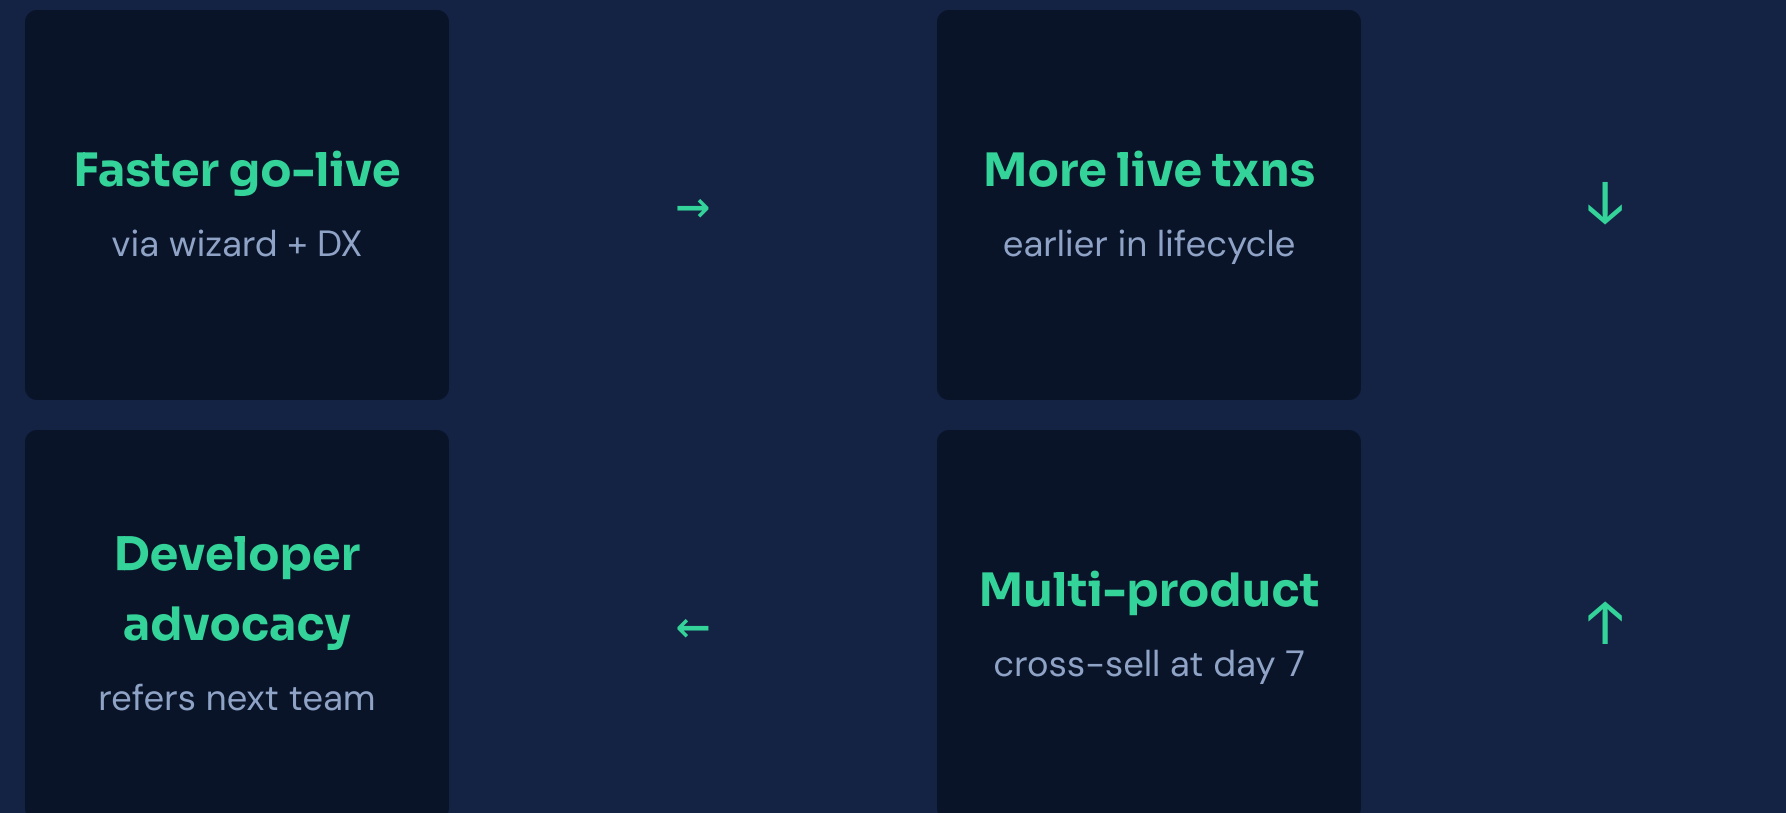

- Wizard becomes the only sign-up path
- Partner activation: Shopify, WooCommerce, Zoho, Tally listings
- Brand campaign: "Live in 48 hours, debugged in seconds."

SUCCESS GATE

+20 pts activation • -50% integration tickets

Compounding loops, not one-off campaigns.

LOOP 01 • THE ACTIVATION FLYWHEEL

Activation earns trust. Trust earns referrals. Referrals feed a new wave of activations. Each loop shortens time-to-first-rupee.

LOOP 02 • DEV → DEV REFERRAL

A developer who shipped in 2 days posts to Twitter / Slack groups. Observability wins become the social proof.

TRIGGER • KYC STALL

Detect >24 hrs stuck at a KYC step → email + WhatsApp with the exact missing doc and a 1-tap re-upload.

TRIGGER • WEBHOOK FAILURE

3+ failed webhooks in 1 hour → push merchant to the replay + AI assistant flow before they file a ticket.

TRIGGER • FIRST-LIVE-PAYMENT

First live txn fires a celebration screen + a contextual nudge for RazorpayX / Capital — converts activation into attach.

One north star. Eight metrics that explain it.

NORTH STAR METRIC

Activated Merchants in 48 Hours

New sign-ups that go from KYC to first live payment within 48 hours. Captures activation velocity, DX quality, and downstream attach intent in one number.

+20pts

target lift in 4 quarters (32% → 52%)

LEADING · WIZARD

Wizard step completion rate	>80%
Time on KYC step	<10 min
Integration test-ping success	>90%

LEADING · DEV OBSERVABILITY

Webhook replay usage / builder	>40%
AI assistant resolution rate	>55%
Sandbox-to-prod parity check	>70%

LAGGING · ACTIVATION

KYC → Live payment rate	+20 pts
Time to first rupee	<48 hrs
Day-7 retention of new sign-ups	+18 pts

LAGGING · DX OUTCOMES

Integration support tickets	-50%
Time-to-integration (TTI)	-40%
Developer NPS	+22 pts

OKRs aligned to activation, not vanity.

FY26 Q1-Q2 · Growth team commitments to the broader org.

OBJECTIVE 01

Make “live in 48 hours” the default Razorpay onboarding experience.

KR 1.1

KYC → first live payment in <48 hrs for 70% of new sign-ups.

KR 1.2

Wizard step-completion rate >80% sustained for 2 quarters.

KR 1.3

Day-7 retention of new sign-ups +18 pts vs. baseline.

OBJECTIVE 02

Build the best developer experience among Indian payment gateways.

KR 2.1

Time-to-integration (TTI) -40% on instrumented sample.

KR 2.2

Integration support tickets -50% by Q2 close.

KR 2.3

Developer NPS +22 pts vs. FY25 baseline.

OBJECTIVE 03

Convert activation into multi-product attach within 30 days.

KR 3.1

First-live-payment celebration → RazorpayX open rate >25%.

KR 3.2

Day-30 multi-product active 8% → 16% on FY26 cohort.

KR 3.3

Multi-product nudge CTR >12% sustained.

The 12-month adoption roadmap.

Q1 • NOW

Ship the Top Two

Guided Go-Live Wizard + Dev Observability Suite to 500-merchant beta. Instrument every step. Weekly research.

OUTPUT • validated MVP

Q2

Scale & activate triggers

Wizard becomes the only sign-up path. KYC-stall + webhook-failure triggers live. AI assistant GA for builders.

OUTPUT • +15 pts activation

Q3

Ship the next wedge

Pre-Approved Credit Dashboard + Merchant Trust Center — built on the activated cohort the wizard just delivered.

OUTPUT • 3× Capital attach

Q4

Open the platform wedge

No-code Payout Builder GA for marketplaces. Partner activation across Shopify, Zoho, Tally. Brand campaign on full-stack.

OUTPUT • NRR > 125%

THE ASK FROM GROWTH

2 squads — activation + DX pods, fully staffed for 2 quarters.

Risk co-ownership — jointly own KYC reason-code library inside the wizard.

Marketing slot — Q2 partner + developer-community push.

THANK YOU

Let's ship the
next 12 million
merchant journeys.
